

Background

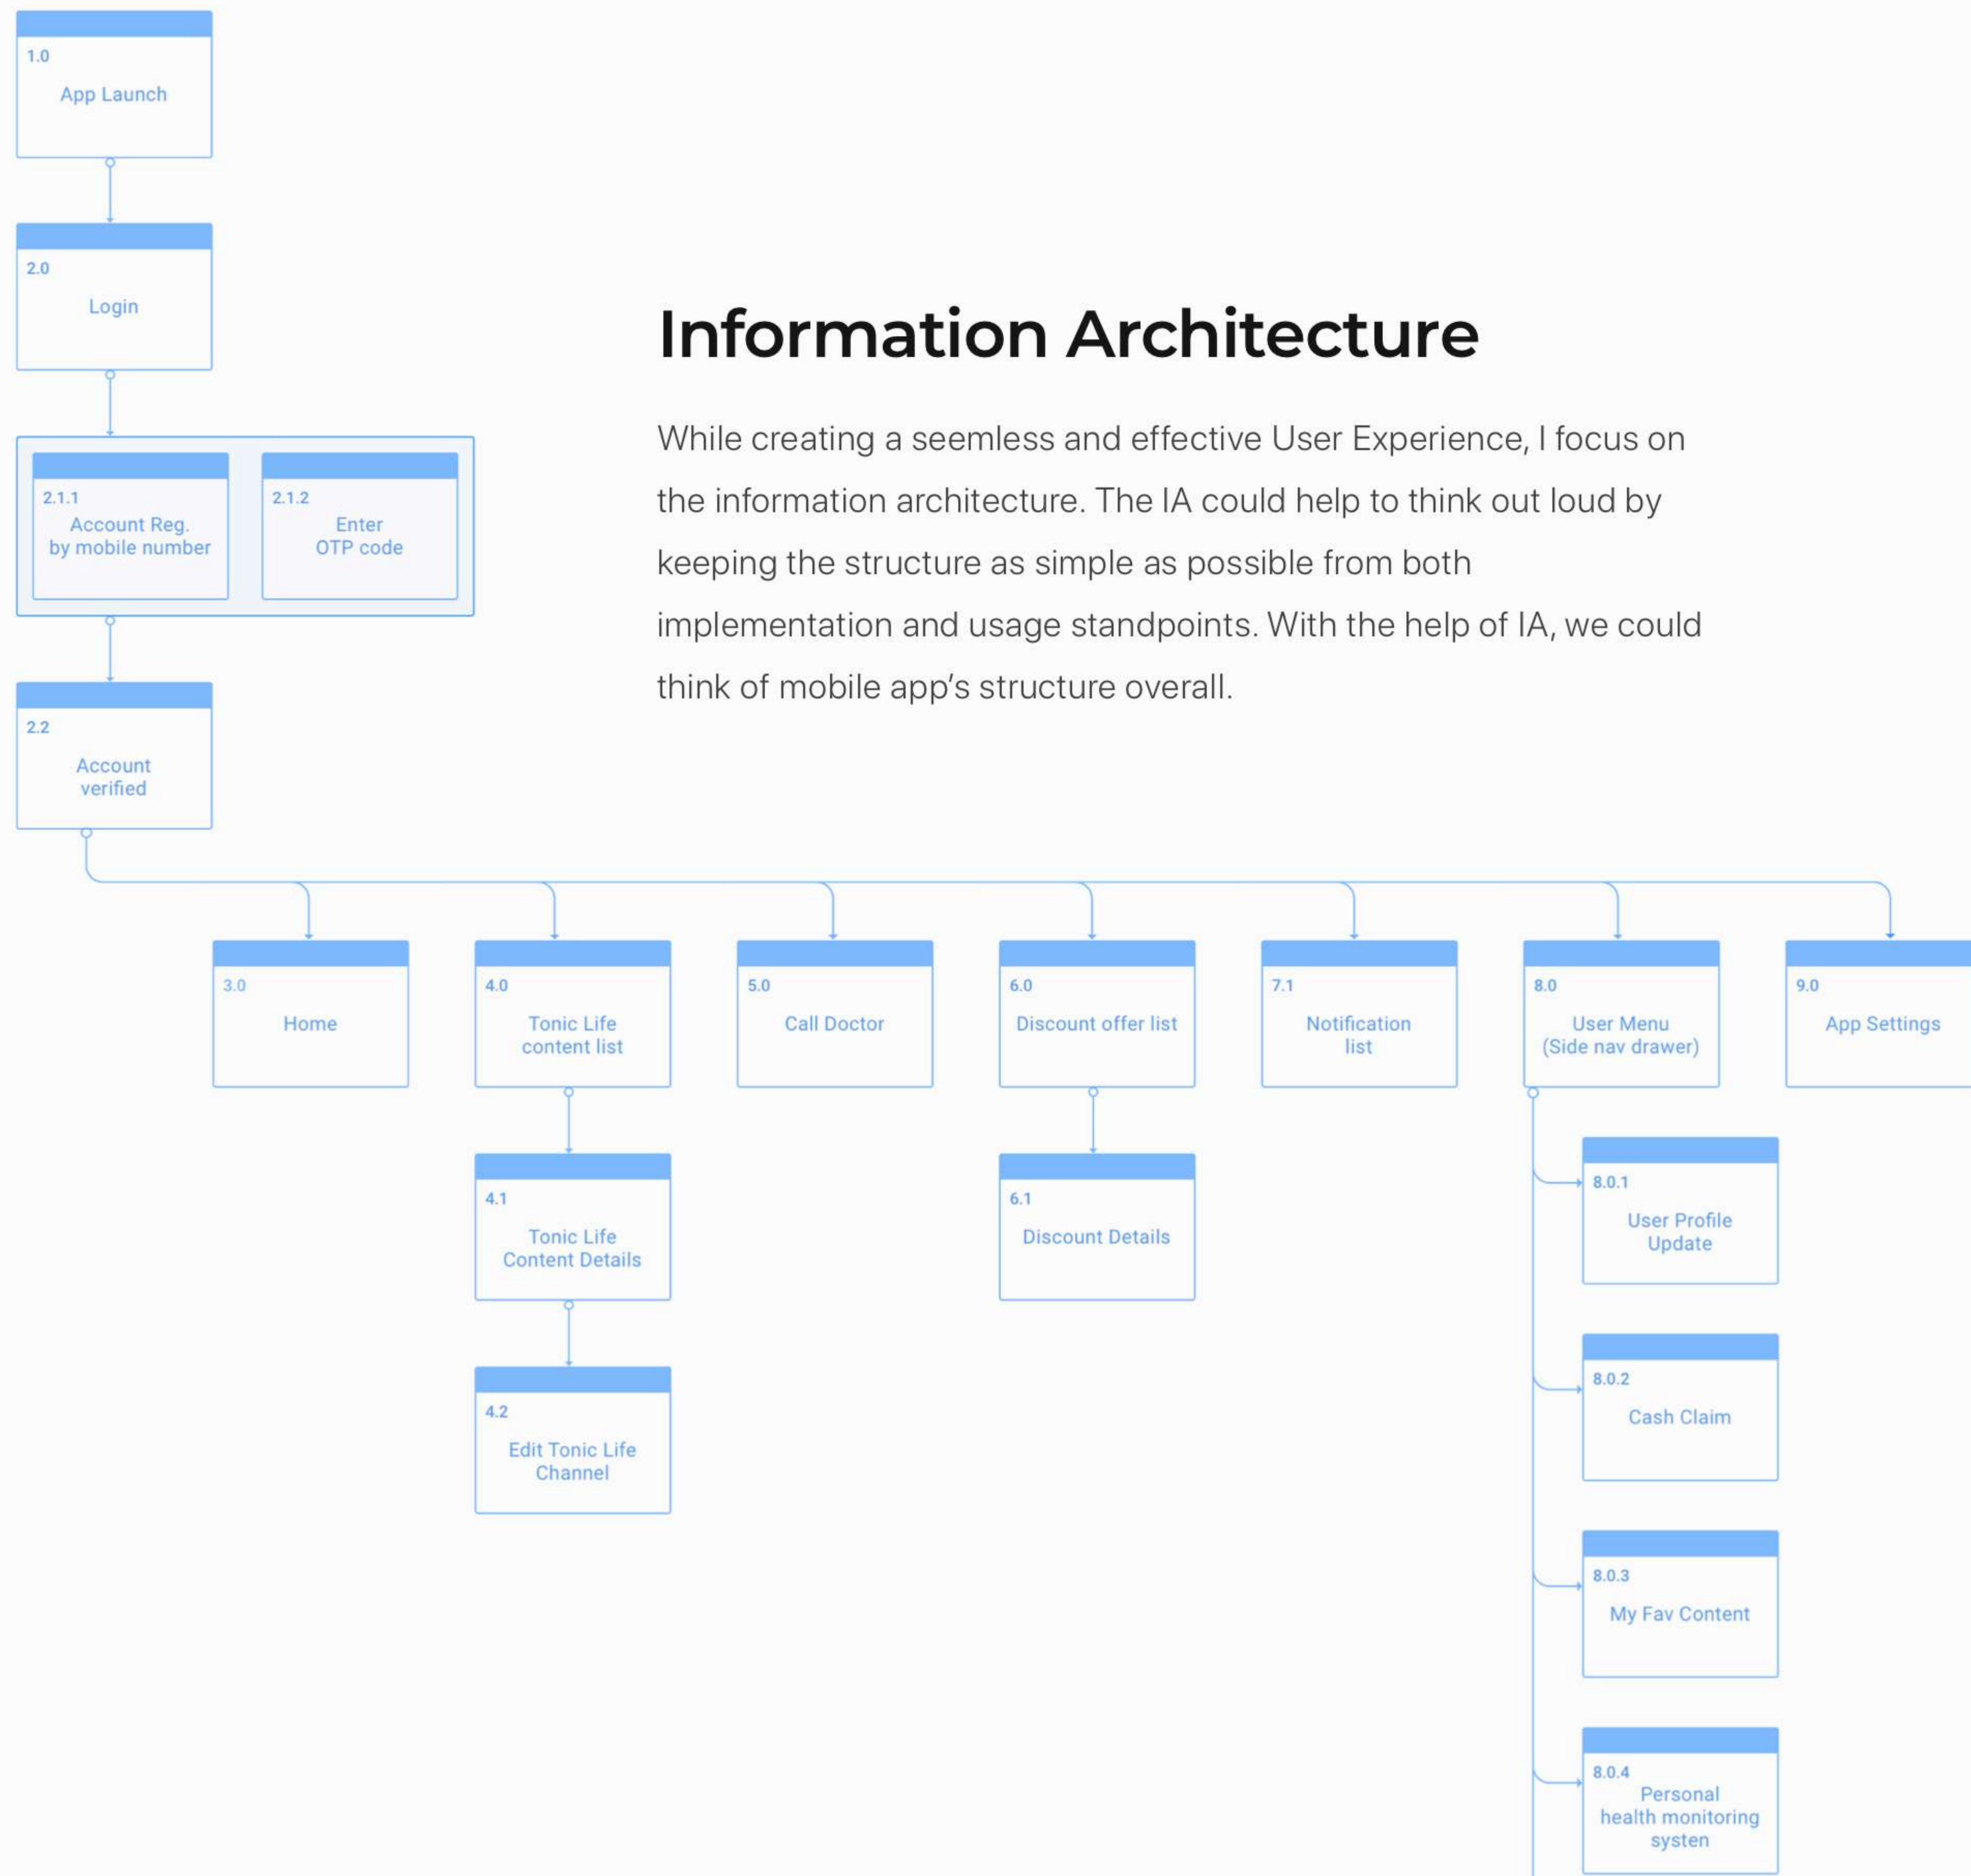

Telenor Health is a purpose-driven, digital health subsidiary established by Telenor Group. Telenor Health is partnering with Grameenphone to bring Tonic to the mobile network operator's 57 million customers free of charge. Any Grameenphone user can join Tonic for free via the 789 short code (USSD and IVR), mytonic.com, and at any Grameenphone retailer.

Tonic's goal is to make it as - Digital Channels for "Everyday Health"

My Role: UX/UI

Deliverables: Prototype, Design

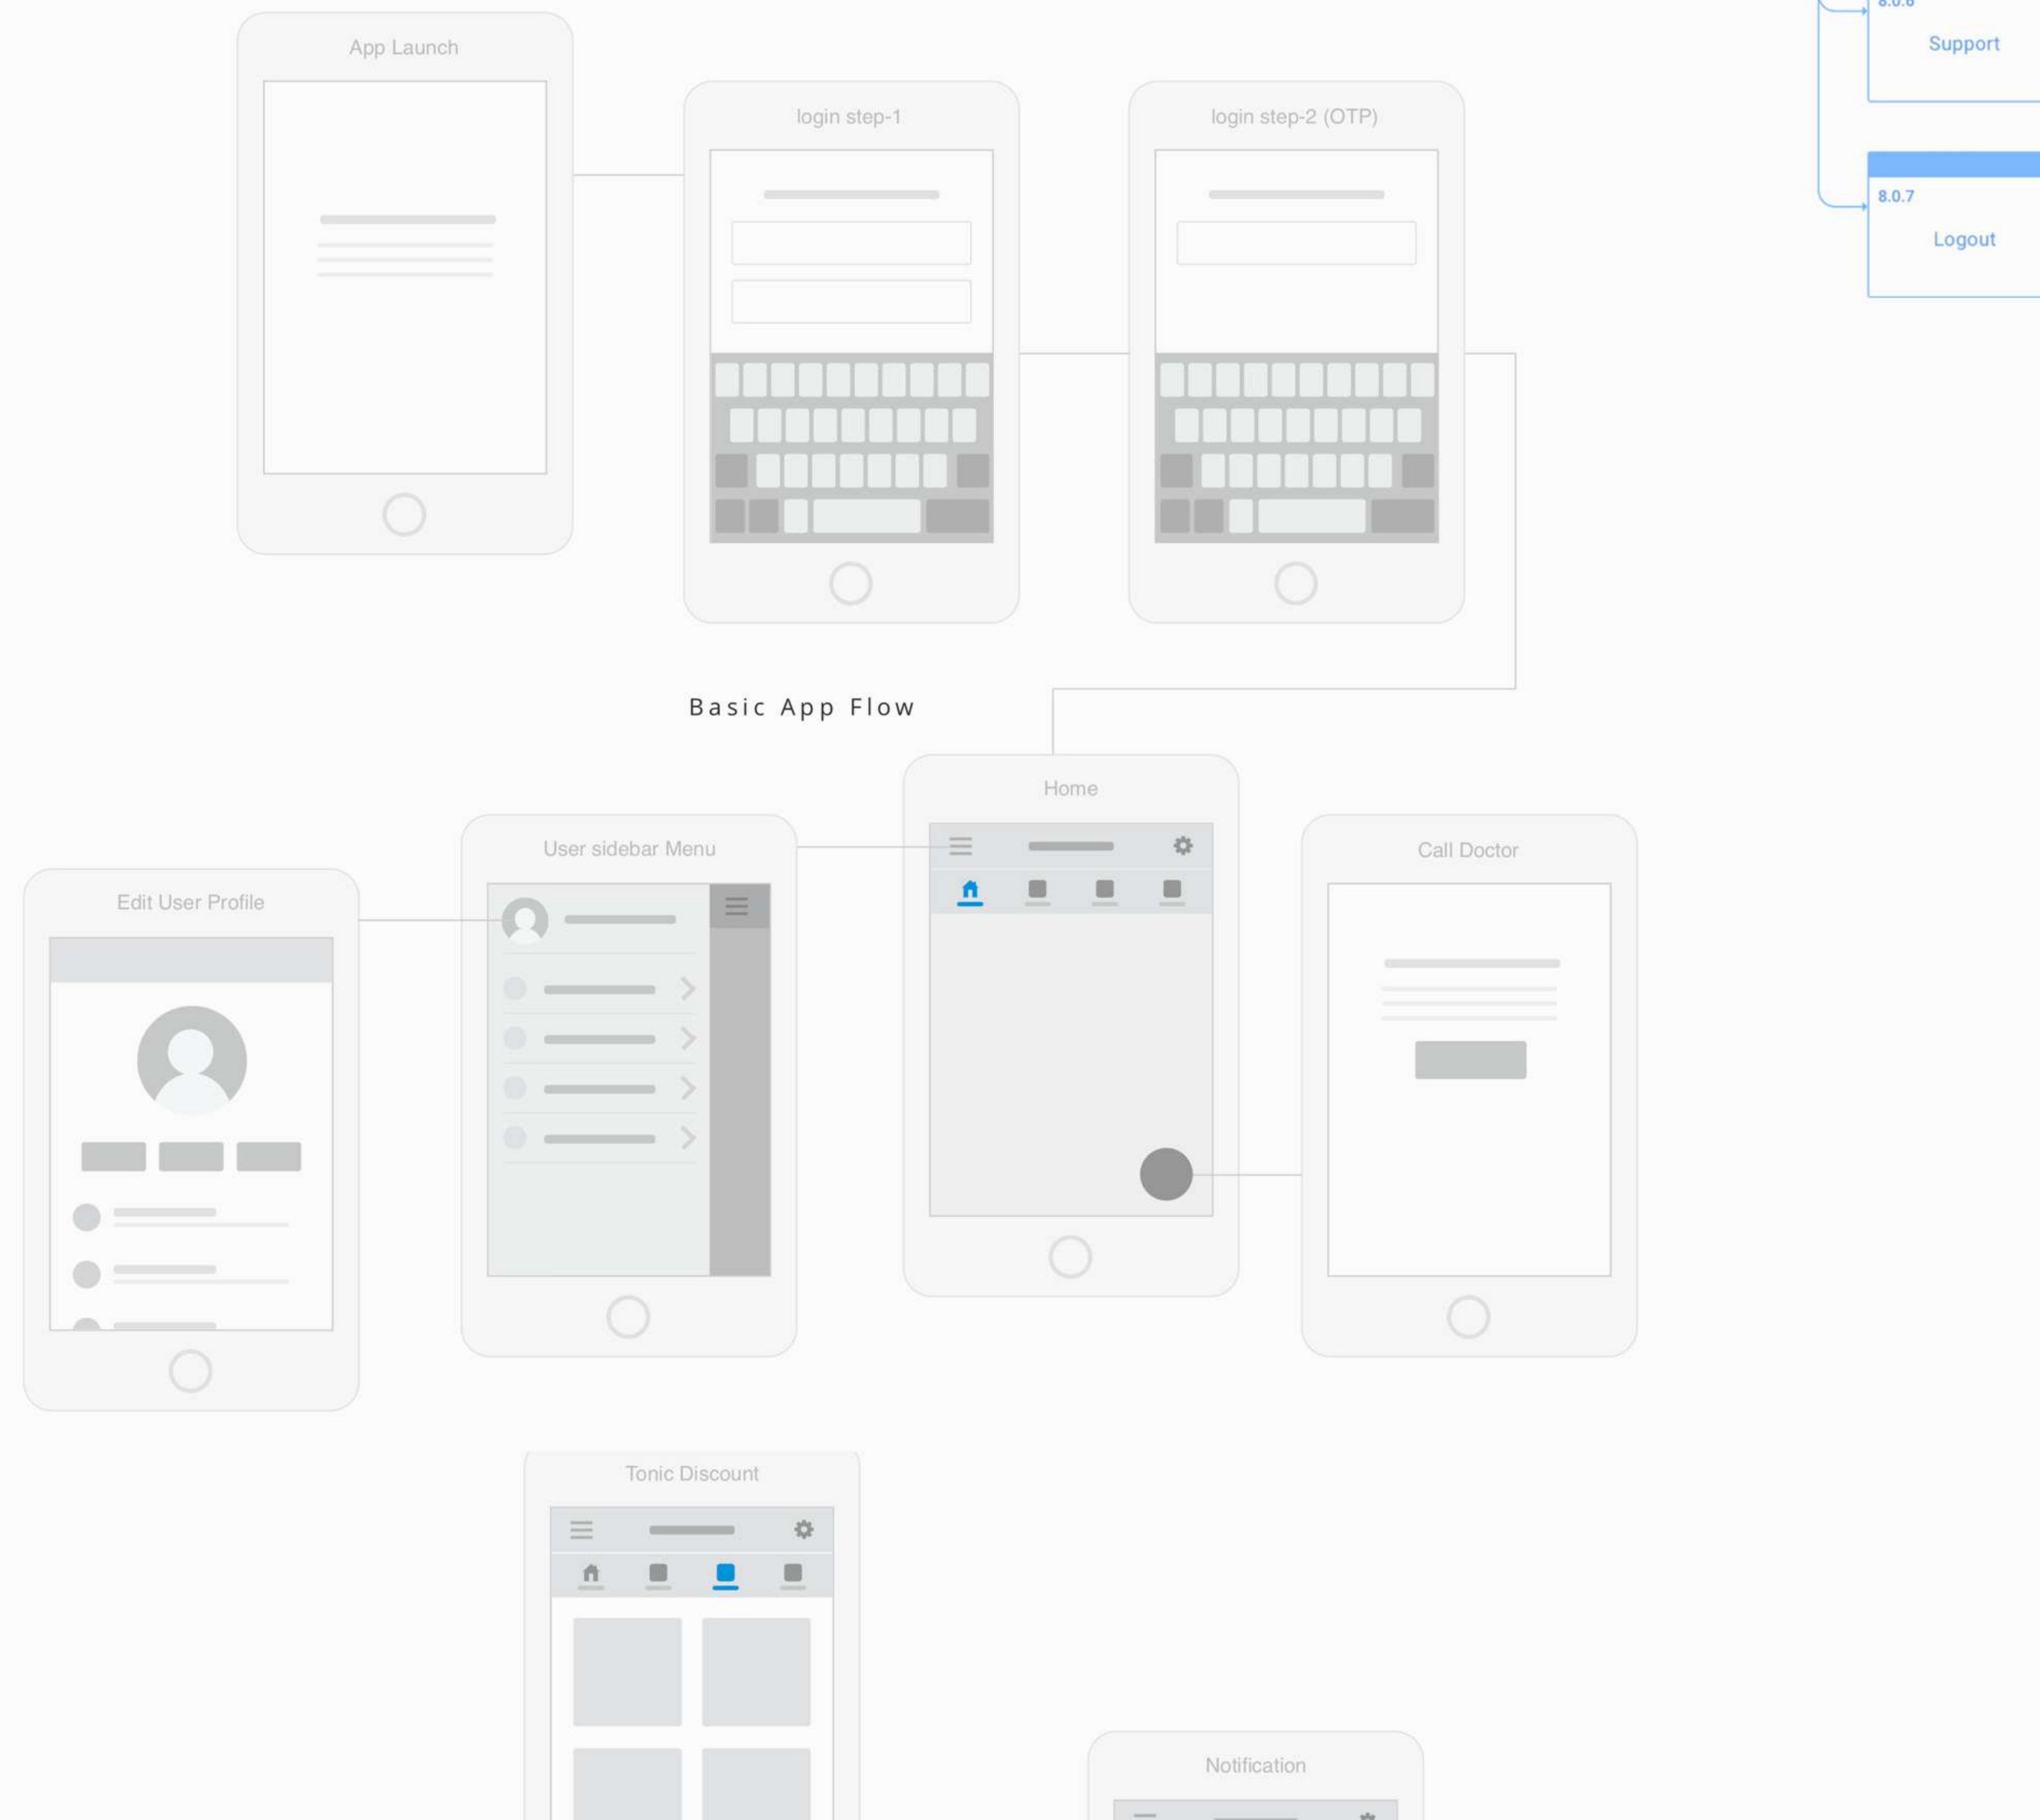

Information Architecture

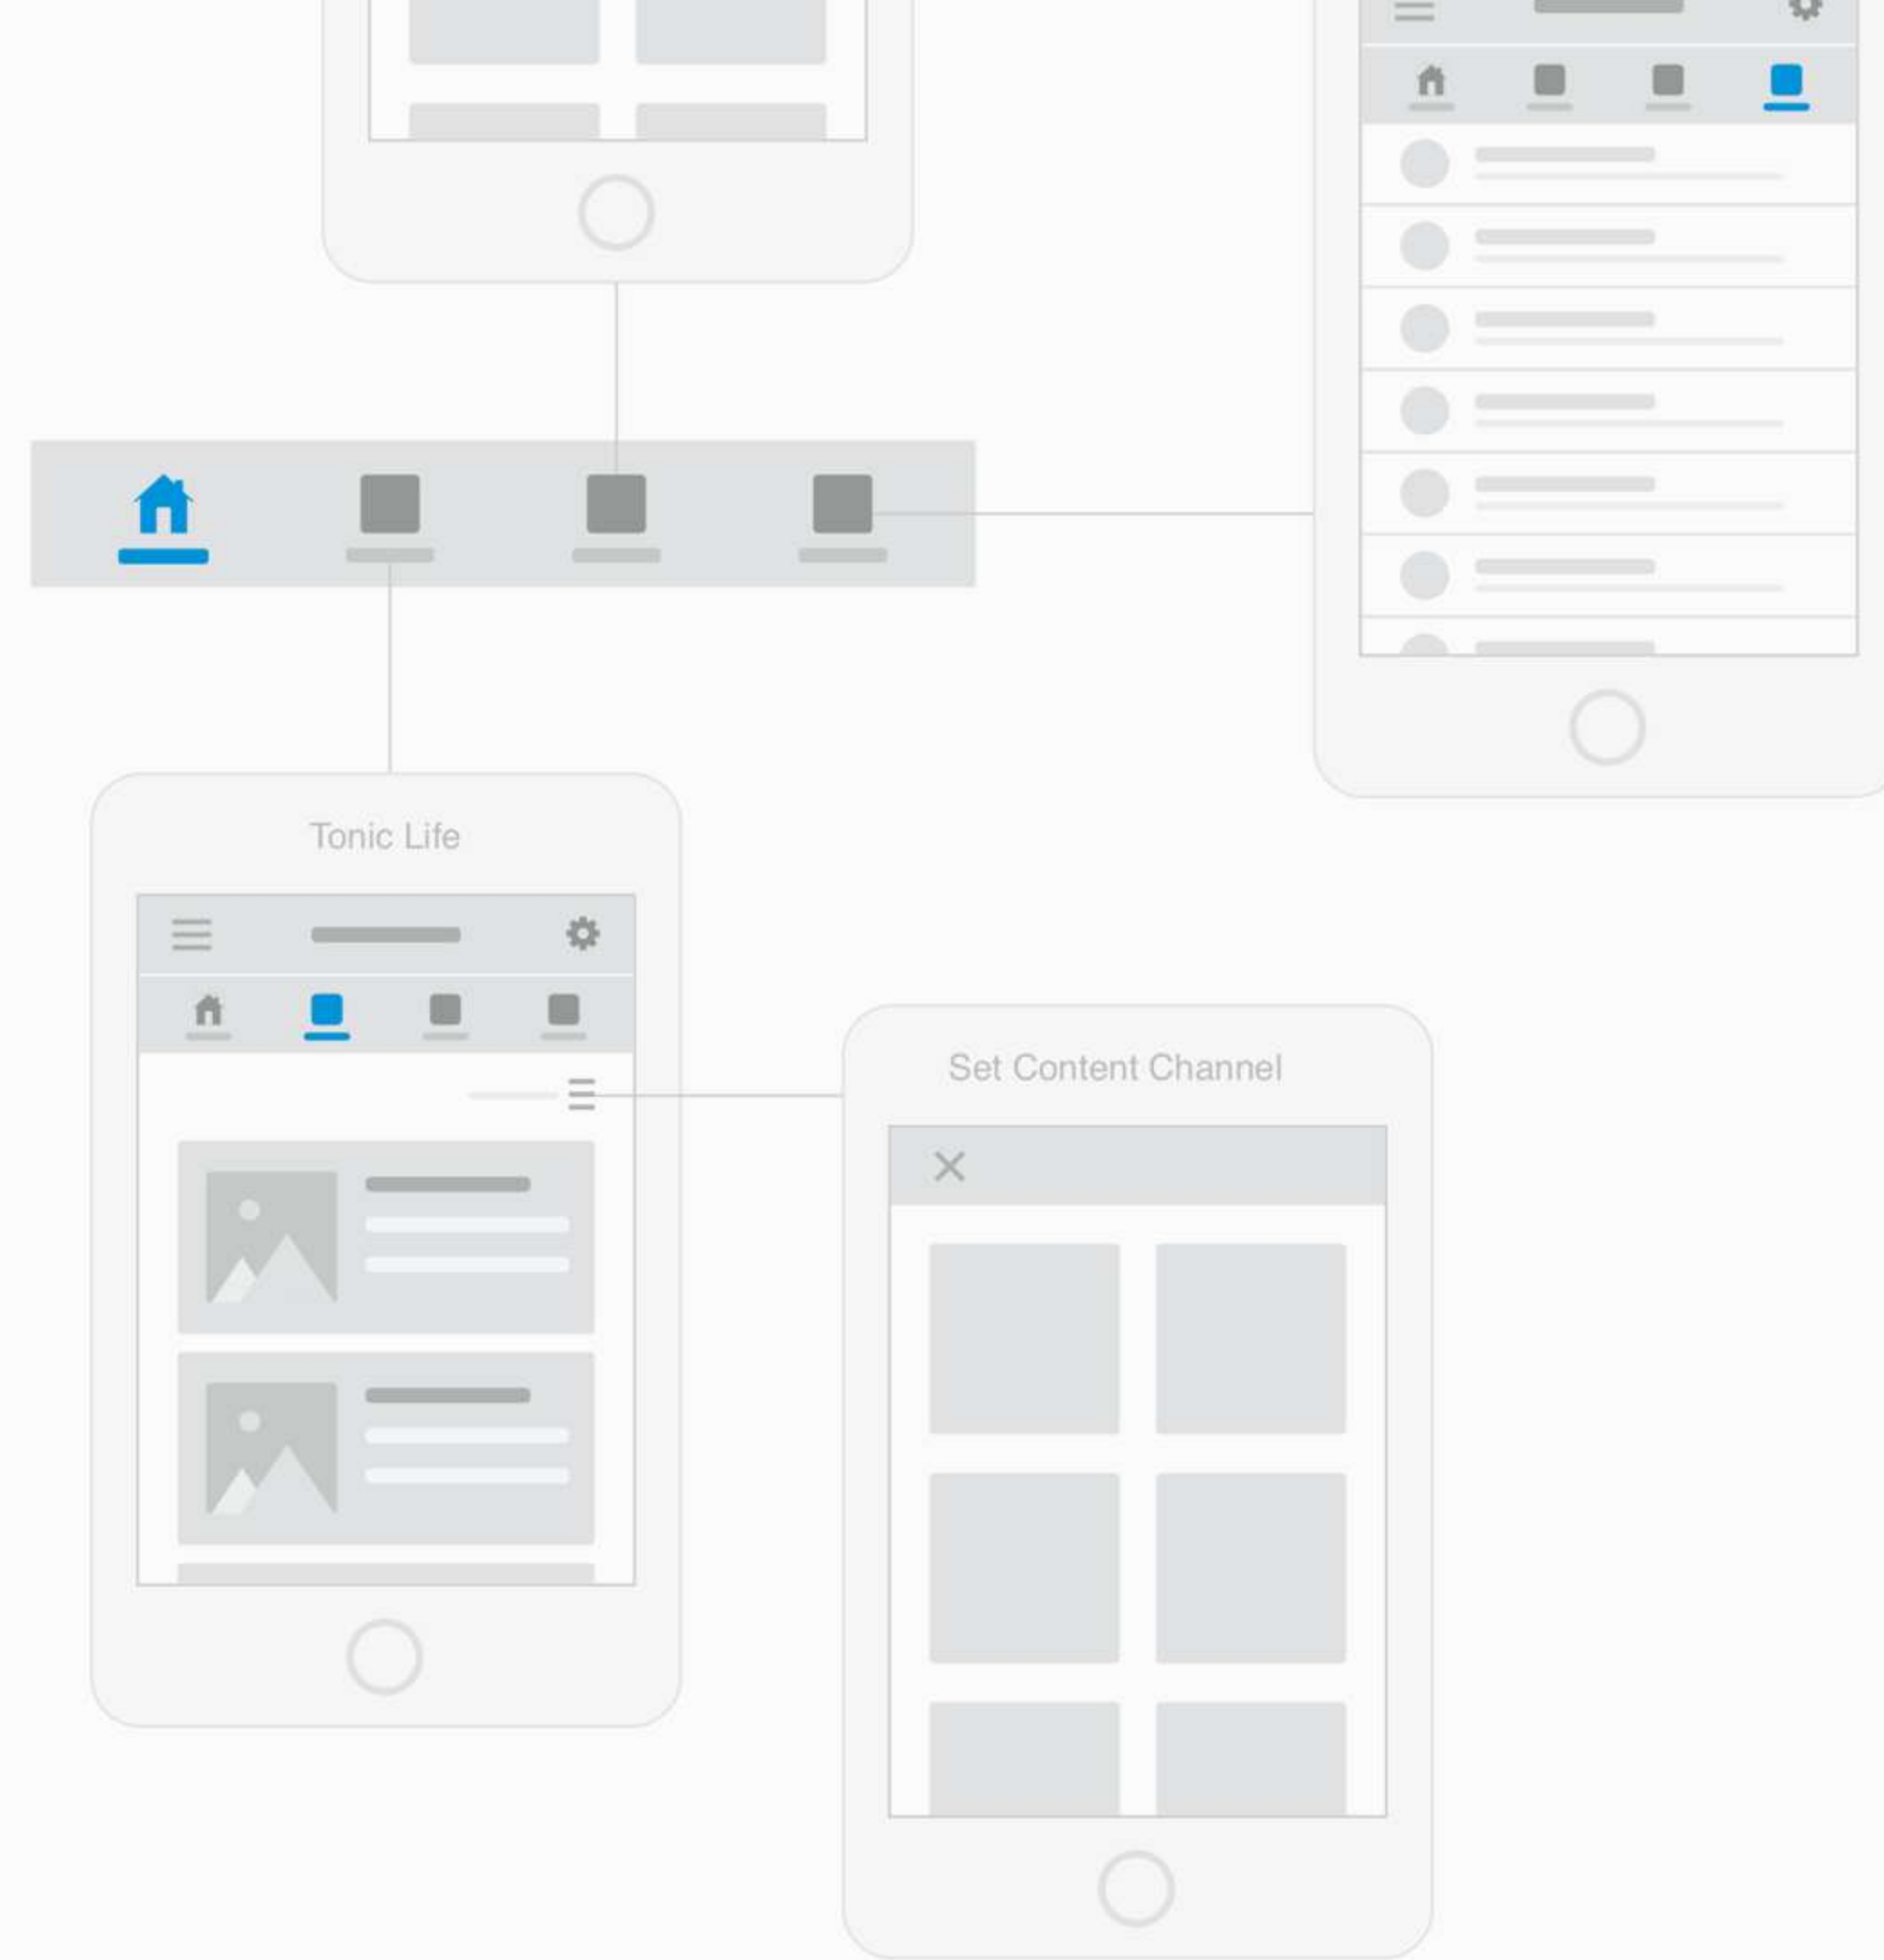

While creating a seamless and effective User Experience, I focus on the information architecture. The IA could help to think out loud by keeping the structure as simple as possible from both implementation and usage standpoints. With the help of IA, we could think of mobile app's structure overall.

User Flow

The following user flow shows the user relationship with application.

Menubar Flow

Tonic Home

The screens offer a series of content which help user to follow healthy lifestyle, as well as other services like Call Doctor Instantly. The home has a clean feeling, improved strong navigation system and proper utilization of brand color.

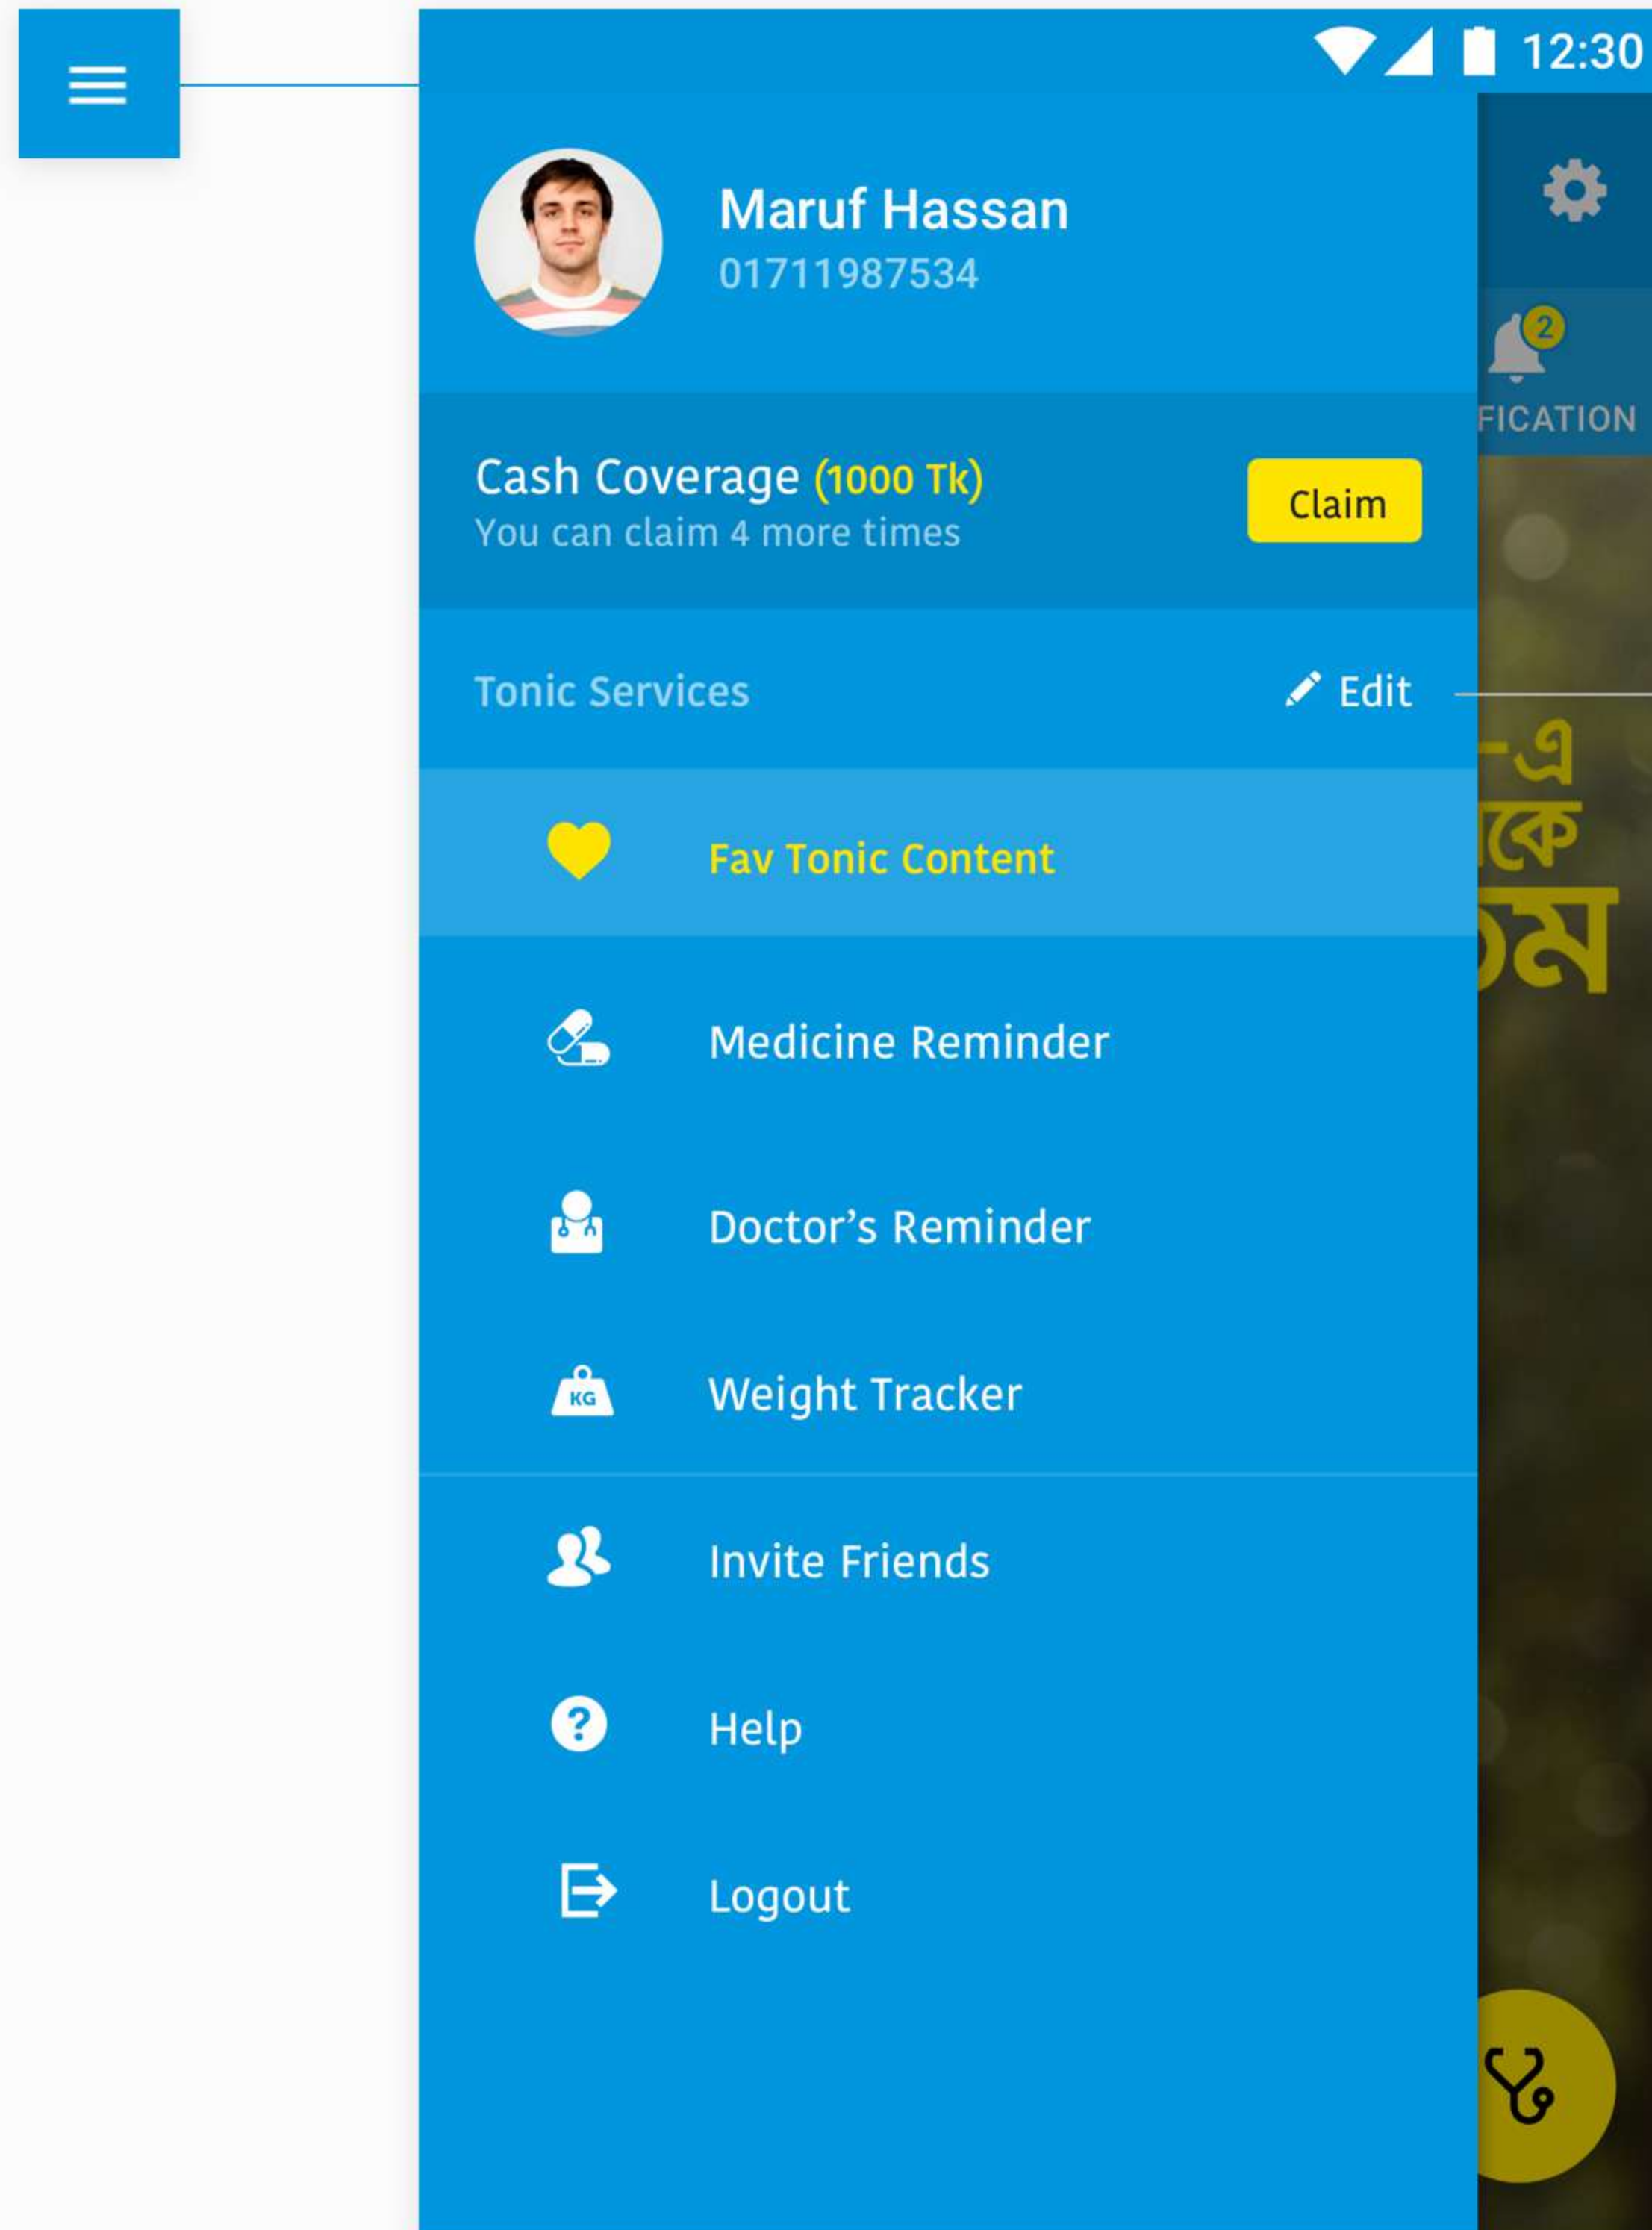

Anatomy of Home

The app bar is quick and easy to work through. User can easily understand the menu by its name without any confusion.

In the large content are, Tonic can show infographic, promotional and featured content in better way. Here we can show a full content or 2 half content.

Call doctor is one of the most important major feature in this app. By floating action button user can quickly connect to doctor.

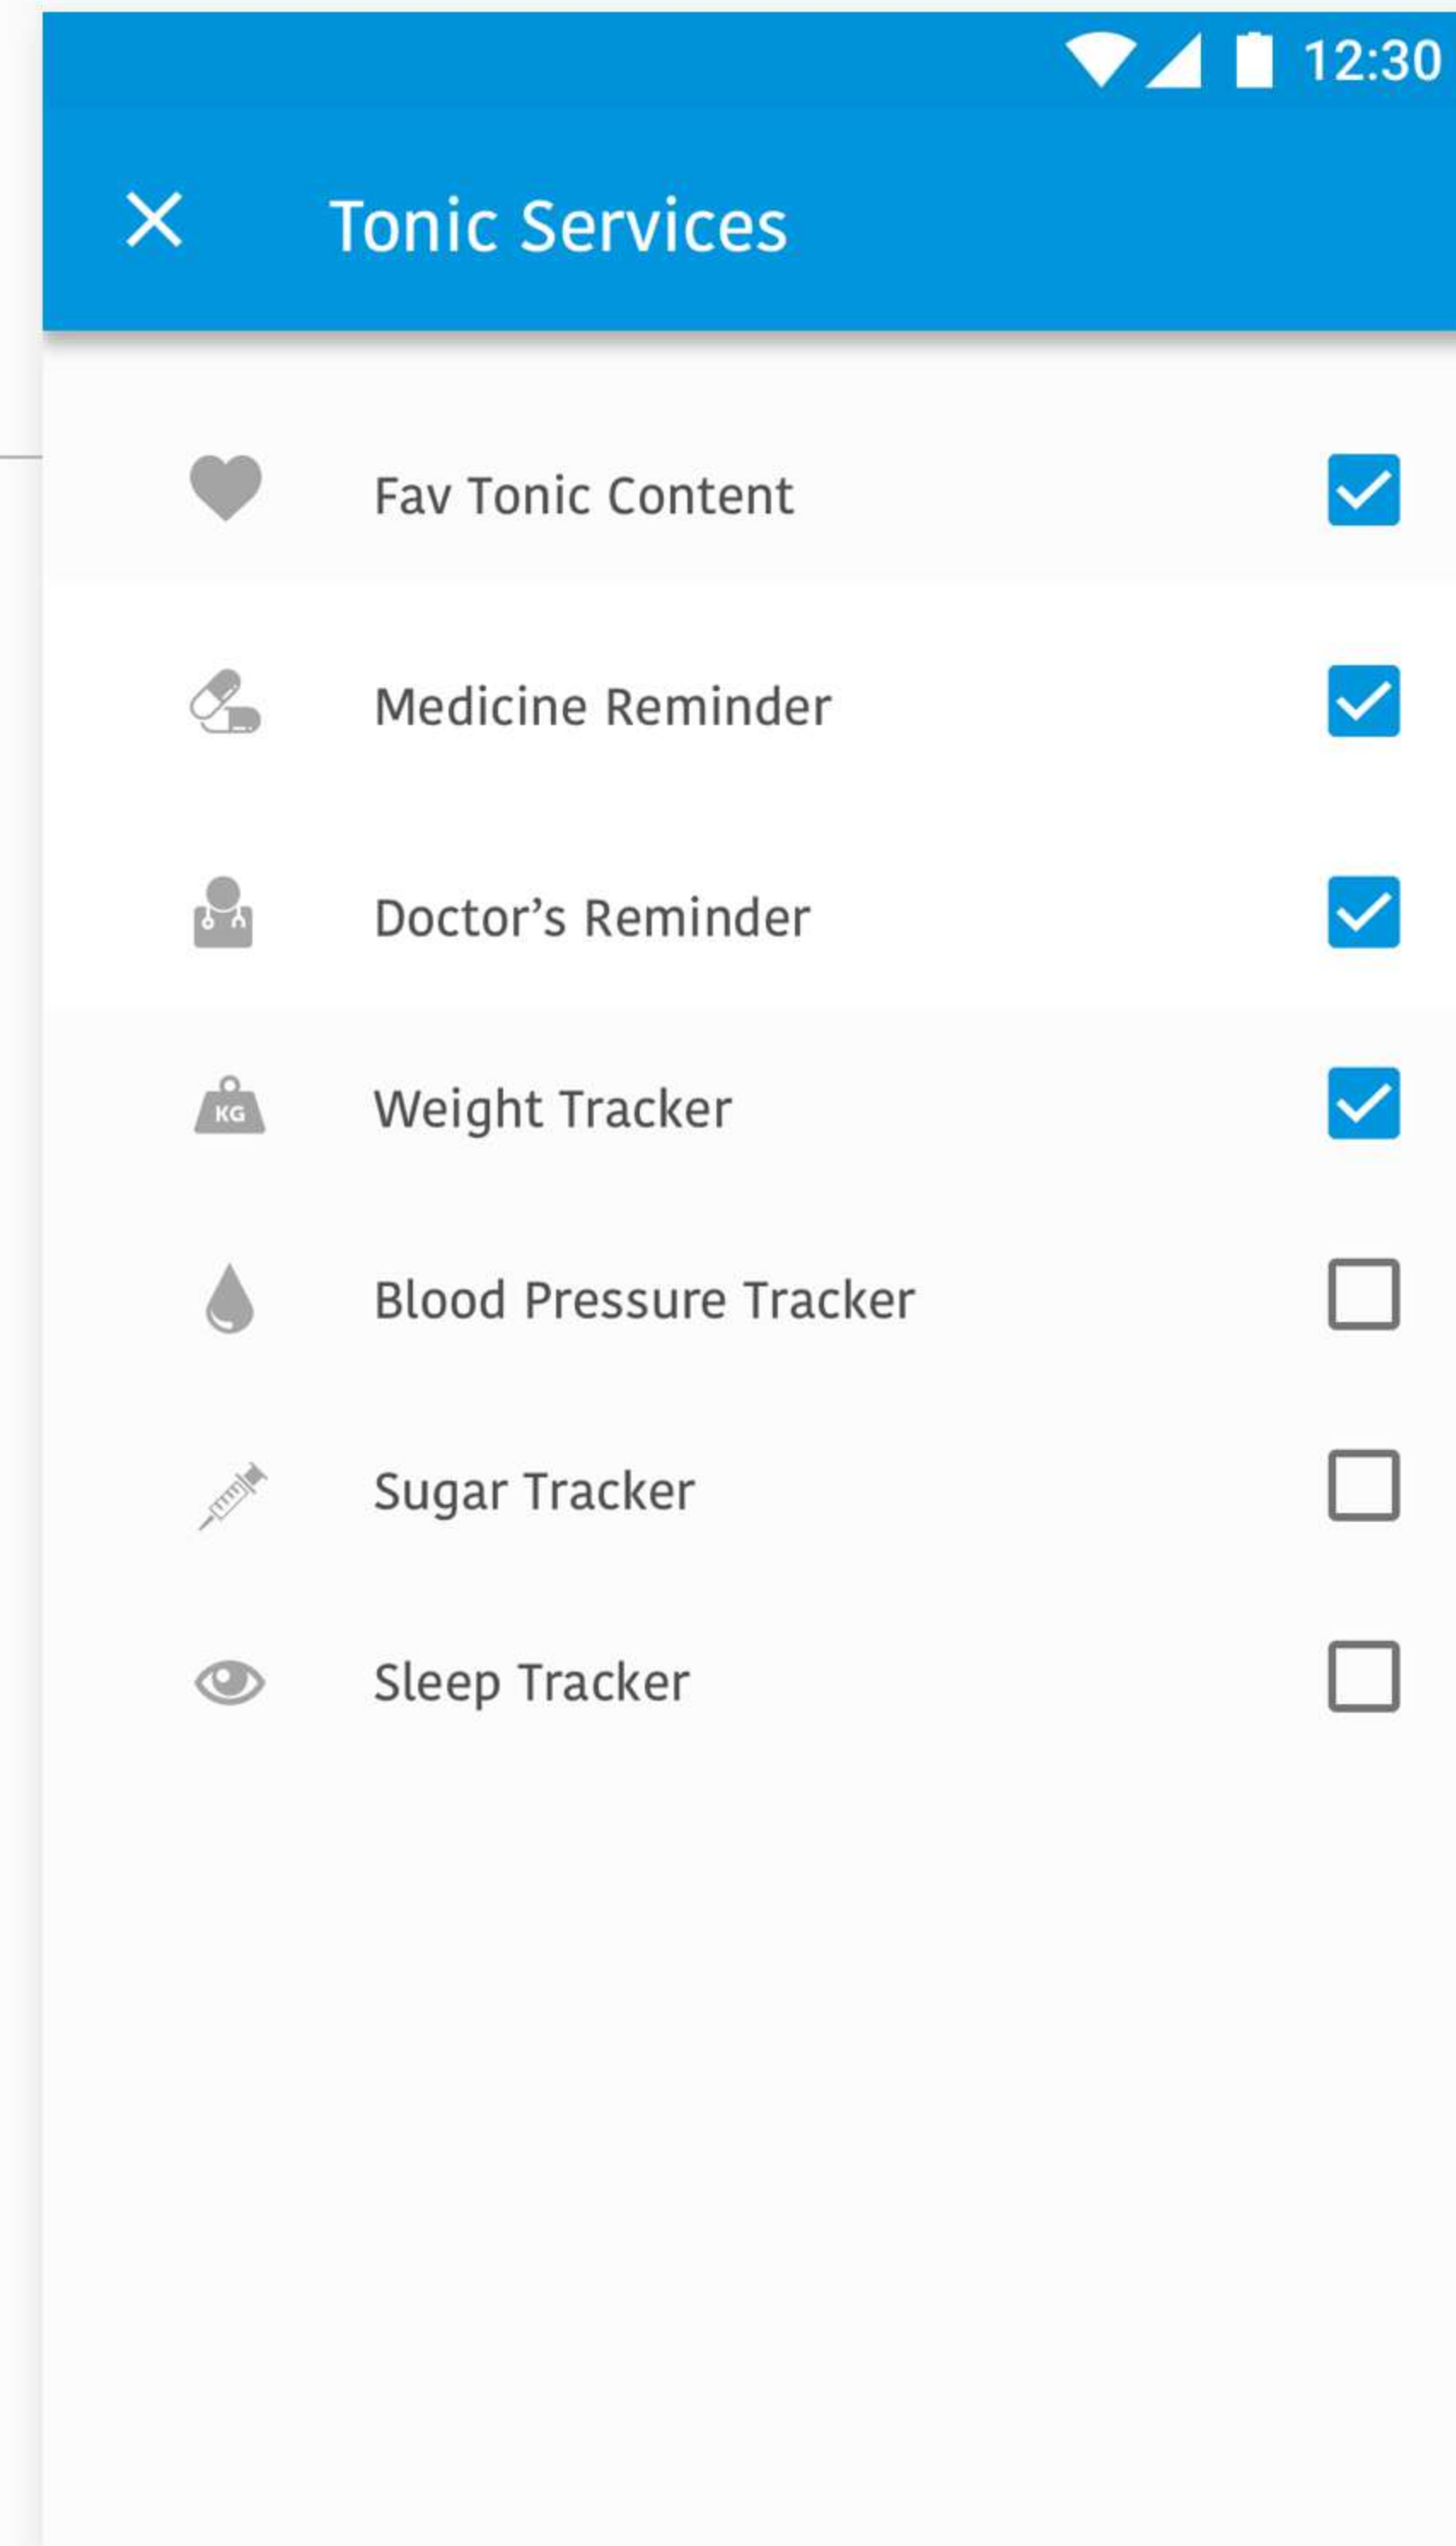

User Sidebar Menu

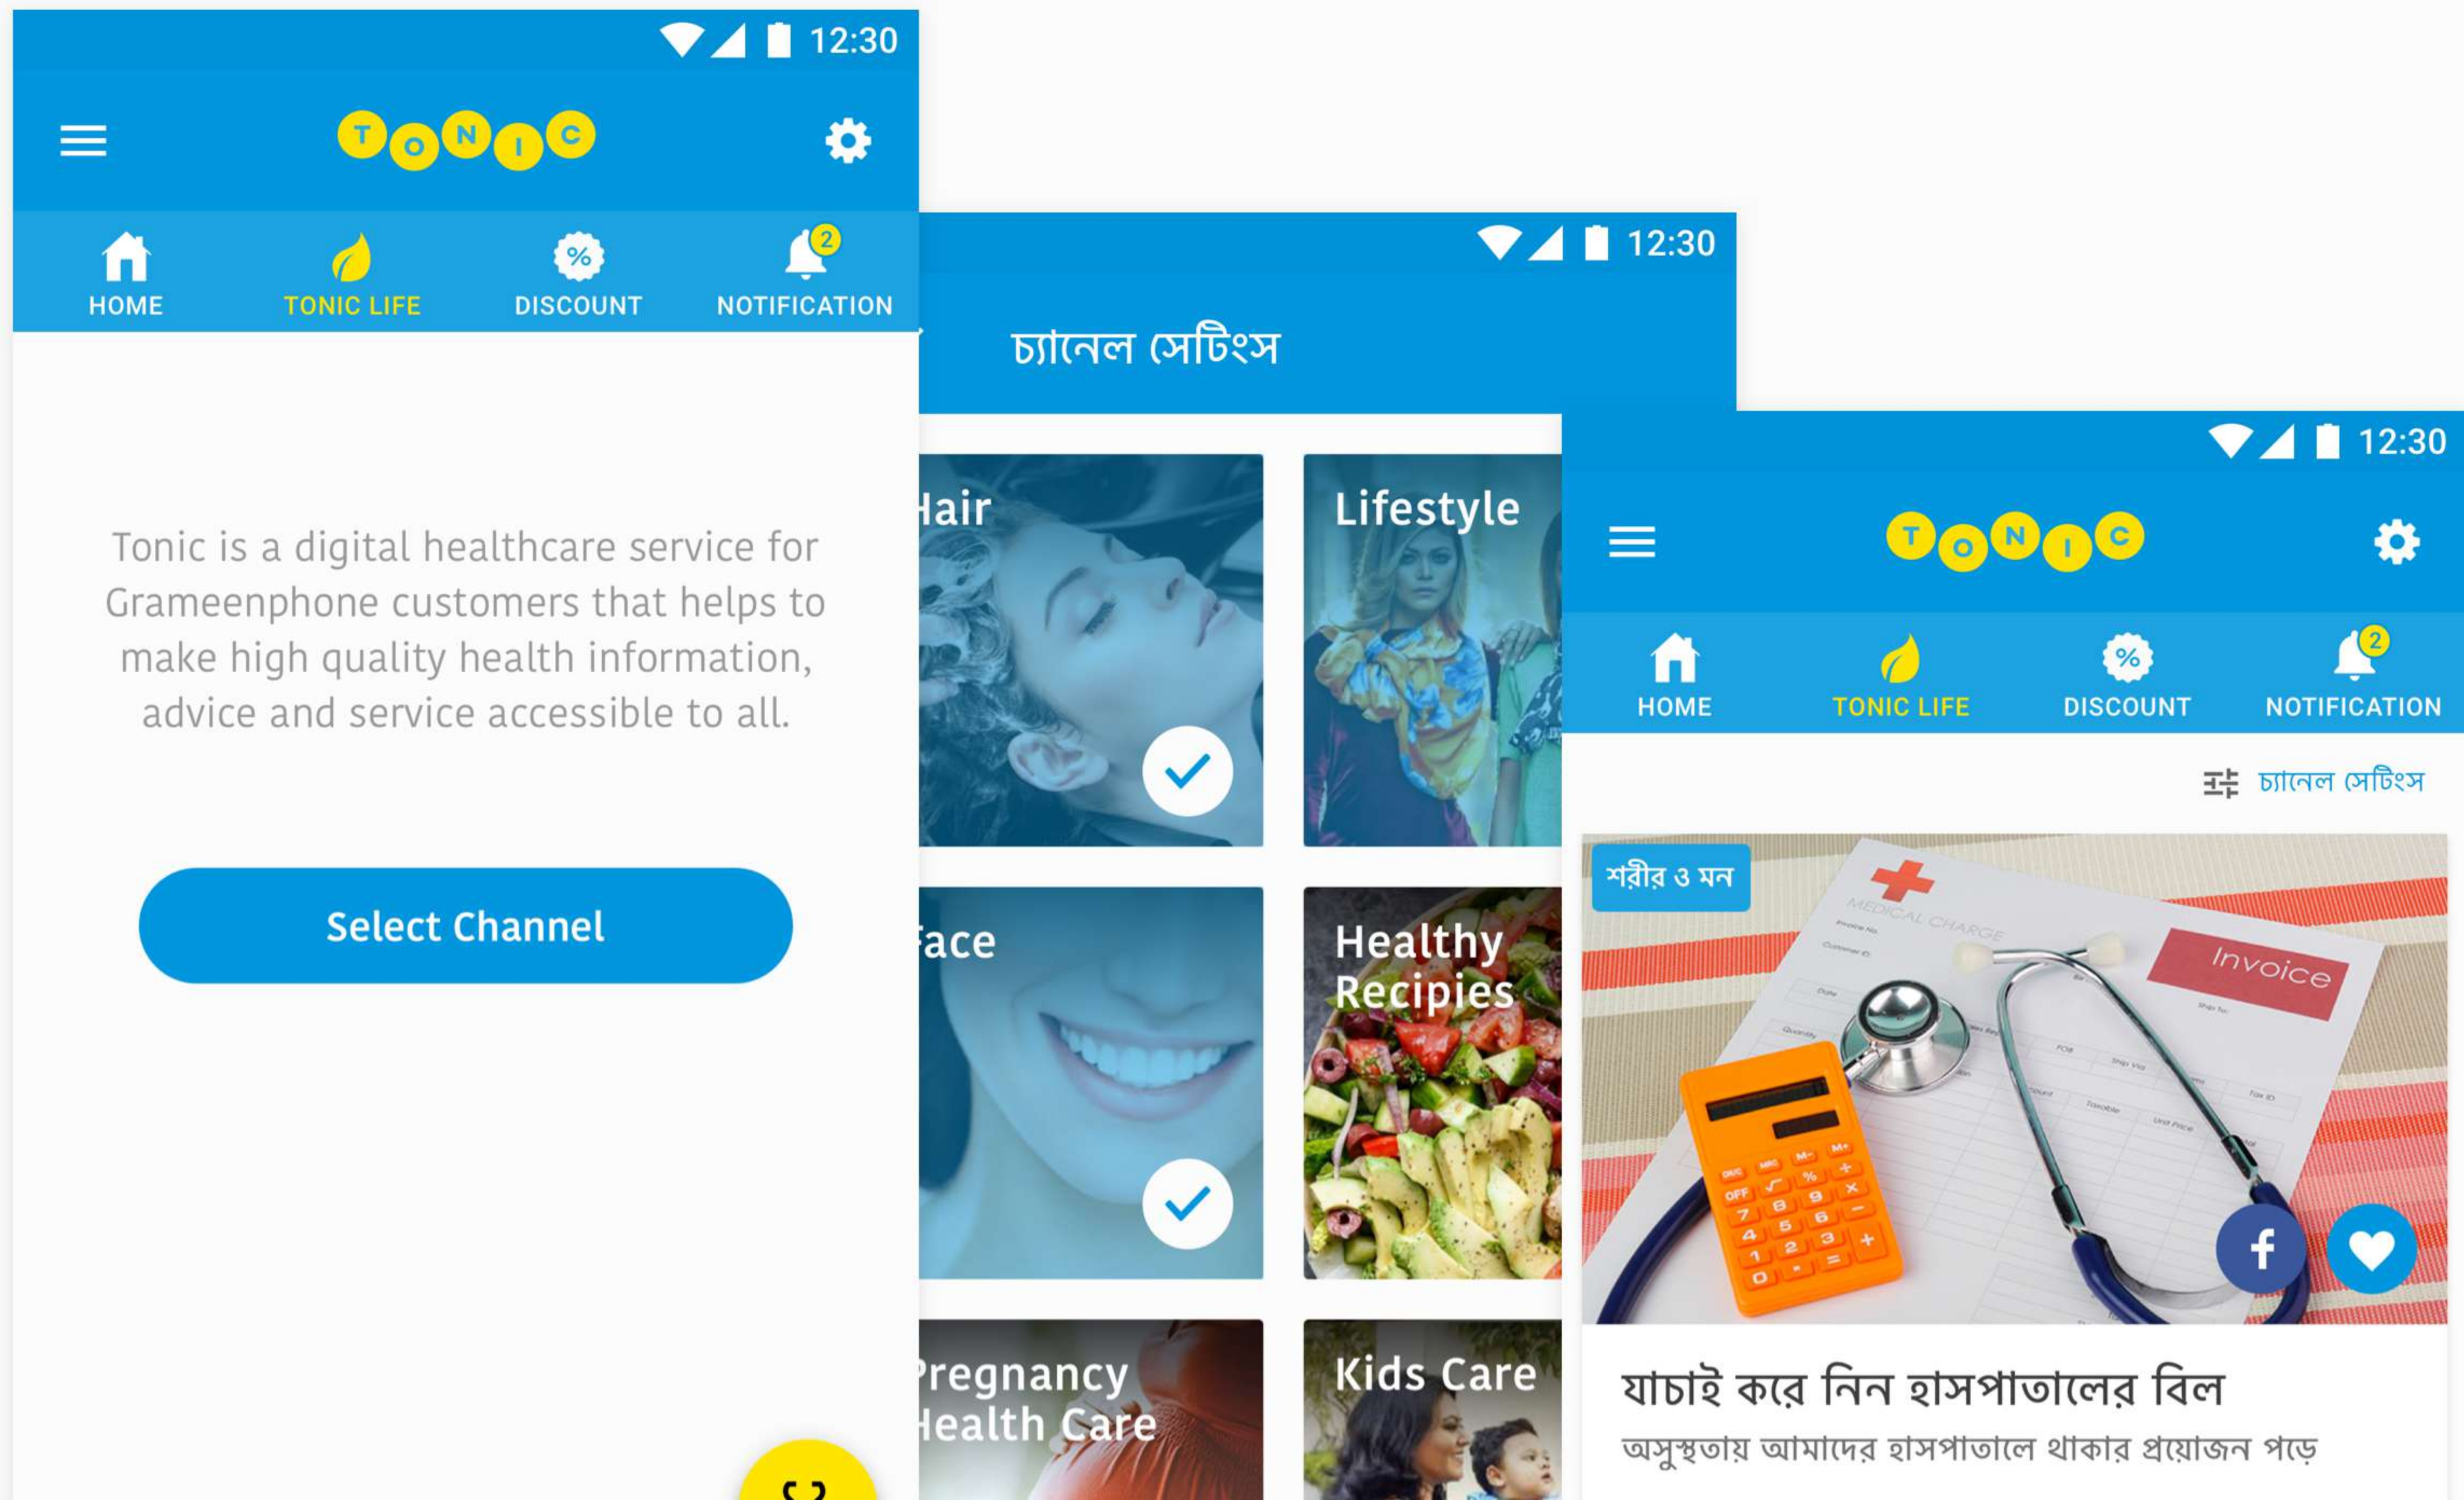

By user sidebar menu, user can access user oriented menu.

User can also able to customize menu as his preferences.

Tonic Life

Tonic life provides tips on how to lead a healthier life and care for users everyday. A user can get content as per users preferences by set or modify category channel. User can share content at Facebook and also able to add favorite content by tapping Fav option.

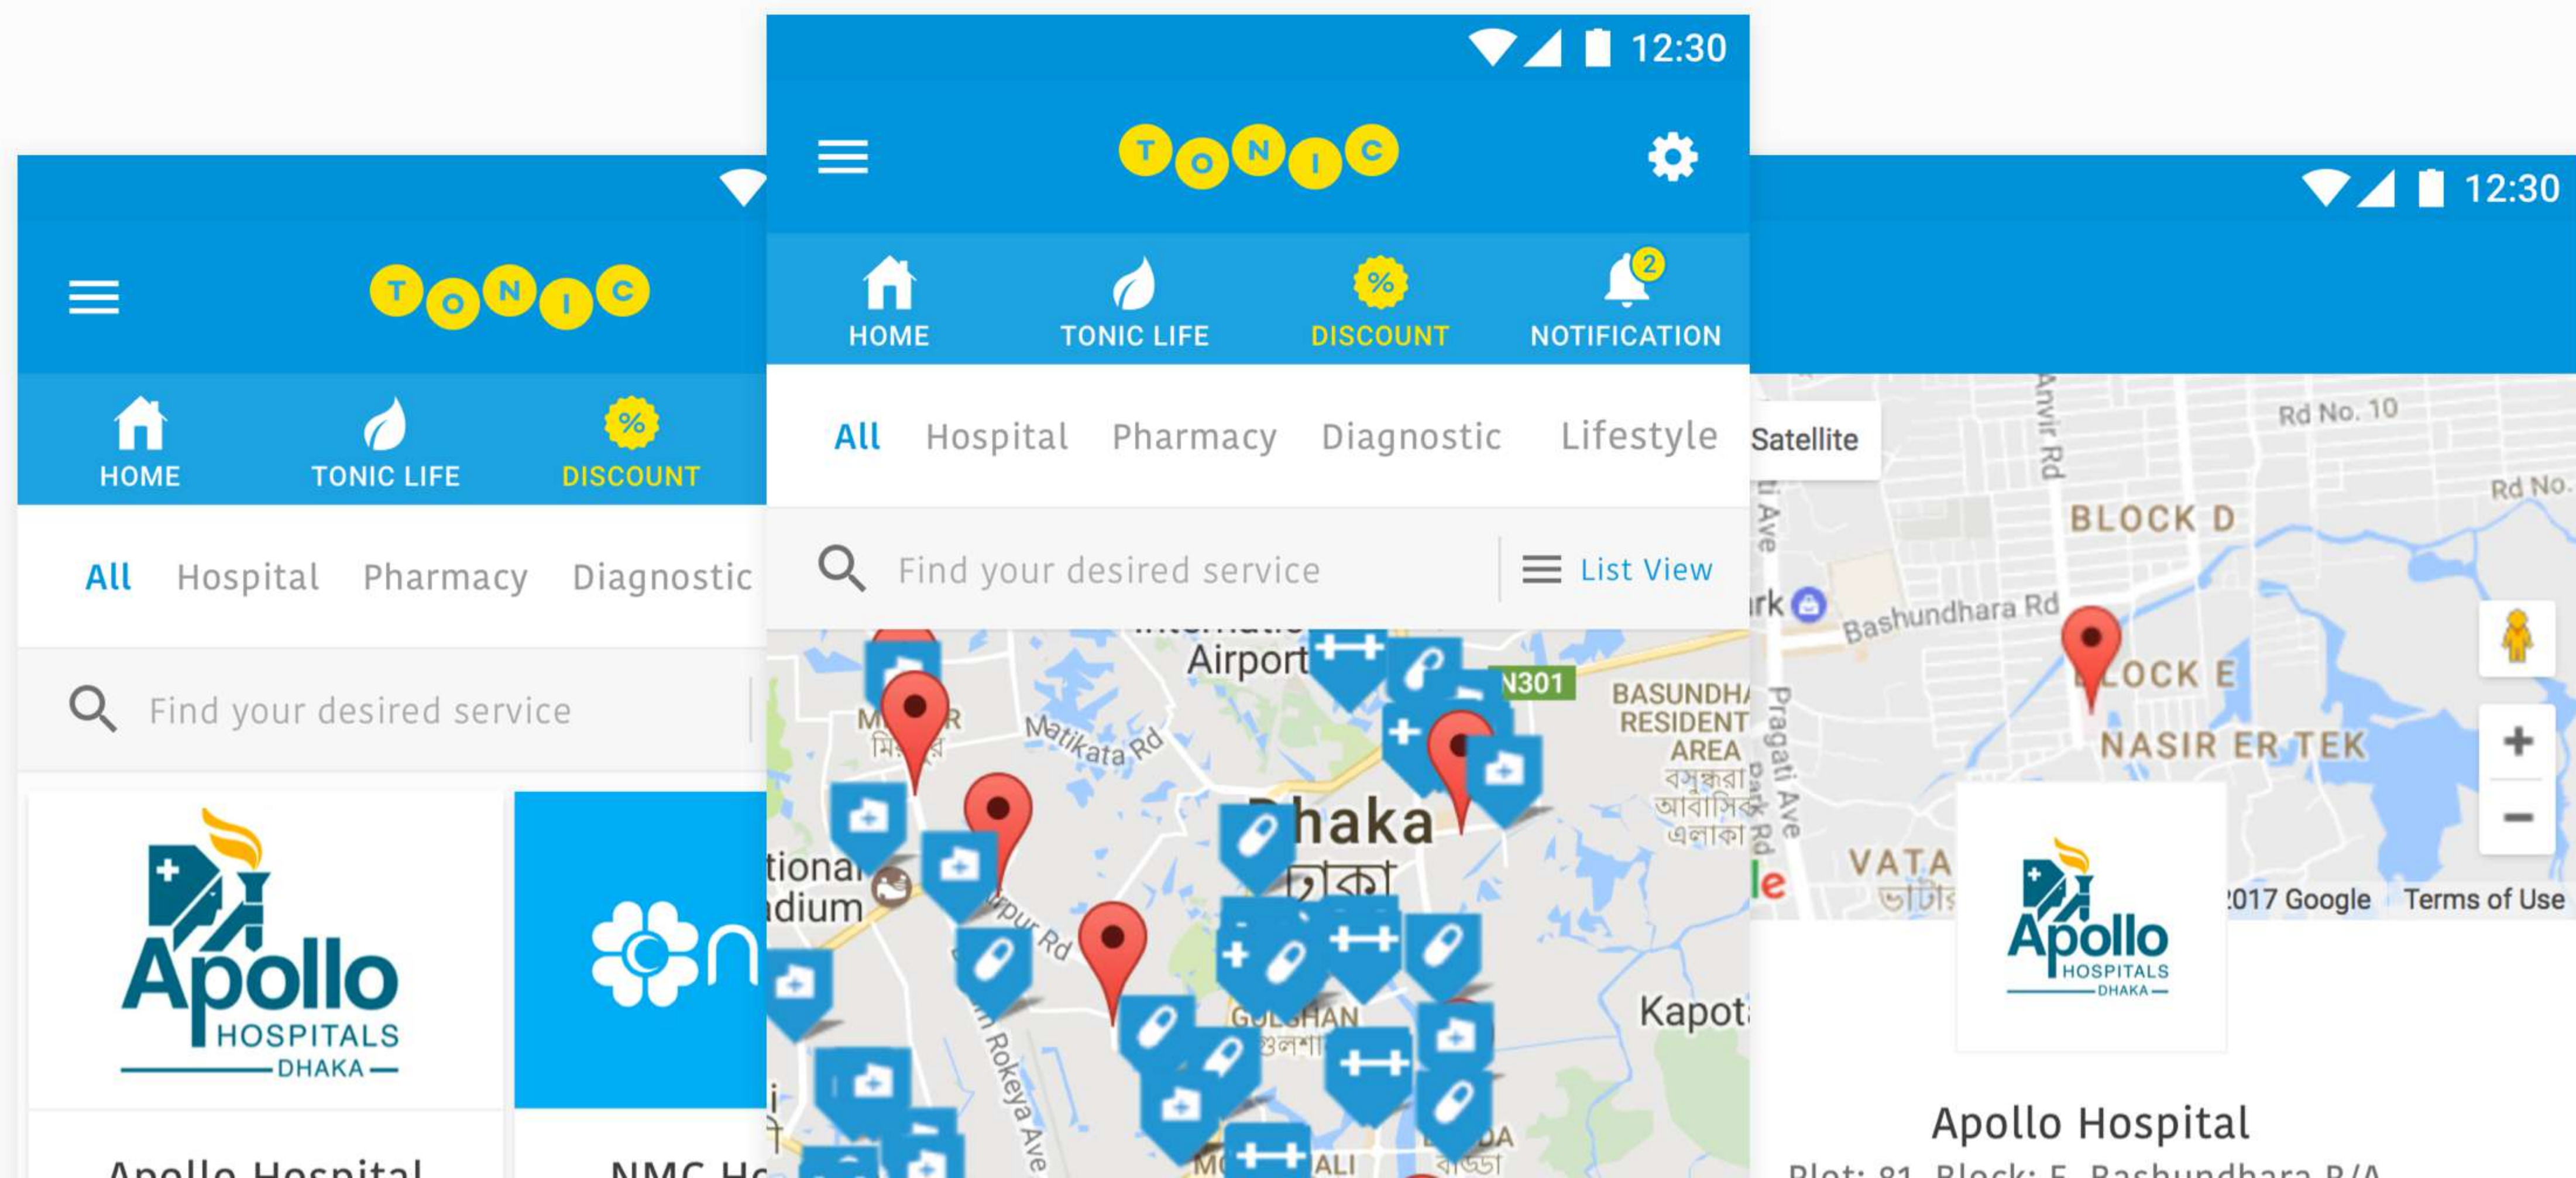

Discount

Developed discount service with quick switching feature.

The user can filter services by type and greater detail view with an improved experience.
